Internship Mini Project – AI Quiz Generator

Project Overview

The **AI Quiz Generator** is a simple Python-based application that asks quiz questions, accepts user answers, checks correctness, calculates scores, and displays results automatically. It behaves like a basic AI assistant by interacting with users through the terminal.

Project Objective

Develop a Python quiz application that can:

- Ask questions
- Accept answers
- Validate answers
- Calculate score
- Display final result

Project Description

The application works in the terminal/command prompt and allows users to answer quiz questions one by one. The system checks answers, updates scores, and displays the final result at the end.

Mandatory Features

- Welcome Message
- Minimum 5 Quiz Questions
- User Answer Input
- Answer Validation
- Score Calculation
- Loop for Multiple Questions
- Final Result Display

- Save Score in Text File

Project Structure

```
AI_Quiz_Generator/  
├── quiz.py  
├── questions.txt  
├── scores.txt  
└── README.md
```

Sample Output

Welcome to AI Quiz Generator

Question 1:
What is Python?
Your Answer: programming language
Correct Answer!

Question 2:
What is AI?
Your Answer: artificial
intelligence
Correct Answer!

Final Score: 2/2

Submission Requirements

- Python Source Code
- Output Screenshots
- Project Report
- README File

Optional Features

- Timer
- Multiple Choice Questions
- Difficulty Levels
- Random Questions
- Colored Output
